

Yes On I-732: Act NOW for Clean Energy

Dirty fossil fuels pollute our air and water, threaten our forests, harm our kids, and damage our climate. I-732 *makes polluters pay*. It accelerates the shift to clean energy like solar, wind, and hydropower. And it returns the money polluters pay to *everyone's* pocket by lowering other taxes.

Clean Air, Clean Water, Healthy Forests

Washington families and kids deserve a safe environment with clean air and water and healthy forests. I-732 puts a price on carbon pollution from fossil fuels like coal and oil, but not on clean energy like solar and wind. It accelerates clean energy, creating good, local jobs, while driving down the burning of fossil fuels and the pollution, asthma, and smog they cause.

Fights Pollution and Climate Change

I-732 fights climate change by *making big polluters pay*. It's an effective, bipartisan policy similar to one that's been working successfully in British Columbia since 2008.

Makes Polluters Pay. Protects Working Families.

Our current tax system hits lower- and middle-income families hardest. I-732 changes that. It uses the money *polluters* pay to *lower* sales taxes, saving the average family hundreds of dollars a year. And it sends tax refunds to hundreds of thousands of working families. It makes Washington's taxes *fairer* as it makes our state *cleaner*.

Protecting our air, water, and climate *just can't wait*. We have a moral obligation to leave our kids a healthier, cleaner Washington! Vote Yes on I-732.

Committee:

Cliff Mass, Professor of Atmospheric Sciences, University of Washington;

Howard Behar, Former President, Starbucks;

Sharon Nelson, Former Chairman, Washington Utility Commission and Consumer Reports;

Bill Finkbeiner, Former Washington State Senate Majority Leader (R);

Rogers Weed, Washington State Department of Commerce Director 2009-2012;

Ramez Naam, Author, Energy and Environment Co-Chair, Singularity University;
